

Erasmus+ Programme Key Action 2 project ARTIN Future

The project partnership of the ARTIN Future project, which was launched in March and deals with the topics of artificial intelligence and digitalization against the current educational background, can positively report that the pilot phase in the respective partner countries has been successfully concluded and a lot of positive feedback was received from the teachers, coaches, educators and students involved. The piloting took place in Germany, Austria, Spain and Latvia.

What was found out?

- The developed learning materials were rated as useful for the target groups of the project, which ensures that the project goals can be achieved
- For example, the involved teachers affirmed that they would thematically integrate the materials and the scenarios embedded into their lessons at any time, as the handling of these was simple and understandable
- The OER HUB could also be used by students and teachers due to its ease of use and contributed to a better understanding of AI for all
